Profile

- Junior R&T Engineer with a strong background in software engineering, machine learning, and formal methods.
Main engineer of the BESSER low-code platform, used across European research projects including *Climaborough* and a 6G research project.
Experienced in model-driven engineering, ML interpretability, and scalable system design.

Employment History

- 08/2024 – Present

- R&T Software Engineer**, Luxembourg Institute of Science and Technology (LIST)
Main engineer responsible for the design, development, and evolution of the **BESSER** platform within the European project *Climaborough*. Technical ownership of system architecture, core components, and feature evolution; development of model-driven and low-code mechanisms; automatic generation of software artifacts.
- 02/2024 – 08/2024

- R&T Engineer Intern**, Luxembourg Institute of Science and Technology (LIST)
Research and development contributions to the **BESSER** platform; implementation of core low-code components and participation in the development of automatic generation pipelines for REST APIs and fluent interfaces.
- 09/2022 – 02/2024

- Machine Learning Researcher**, University of Paris-Saclay
Research on machine learning interpretability and formal methods; improved MNIST latent factor separation using β -VAE and advanced CNNs; development of predictive models (Logistic Regression, SVM, Random Forest, XGBoost); implementation of partial LTL model checking in Python and C++.
- 04/2022 – 07/2022

- Software Engineer Intern**, Ouidou, Paris
Implementation of a new software framework and development of ESRI-based GIS applications for the Office National des Forêts, supporting public forest management.

Education

- Master's Degree, Computer Science**, University of Paris Saclay
 *Graduated with Highest Honor*
Autonomous Systems includes modeling, algorithms, programming, and security. It provides more theoretical knowledge in AI (multi-agent systems, data analysis, machine learning), and formal methods, and leads to a significant initial research project.
- Bachelor's degree, Computer Science**, University of Paris Saclay
Software Design and Systems Intelligence

Skills

Core Technical Skills	■ Software Engineering: Design and development in Python, C, Java; RESTful API design and integration; SQL-based data management; modular and microservice-oriented architectures. ■ Machine Learning & AI: Design, training, and evaluation of ML/DL models (CNNs, GANs, RNNs); model interpretability; feature engineering; experimentation using TensorFlow, Keras, and Scikit-learn. ■ Modeling, Formal Methods & Systems: UML, Petri Nets, automata theory, computational models; system modeling and verification; application of formal methods in intelligent and autonomous systems. ■ Systems, DevOps & Platforms: Git-based collaborative development; Docker containerization; CI/CD pipelines (development-level); Linux environments; basic cloud deployment and services.
Tools & Environments	■ IntelliJ IDEA, Visual Studio, MATLAB, SolidWorks, Meca3D, Regressi, ExAO
Project Work & Collaboration	■ Agile/Scrum project environments; Jira, Confluence, Slack, Microsoft Teams; cross-functional and international team collaboration.
Languages	■ French (Native), English (Fluent), Luxembourgish (Learning), Serbo-Croatian (Native)
Additional Strengths	■ Analytical problem-solving, rapid learning, research methodology, technical communication, adaptability

Miscellaneous

Hobbies & Interests	■ Team sports (football, basketball); fitness and running; automotive technology and motorsports.
Volunteering	■ Regular blood donor; involvement in local community development and environmental sustainability initiatives.
